

Bird-list

Last update 30. March 2016

Important notes:

- The numbers refer to species frequency: 4 = common, 3 = less common, 2 = few, 1 = single record.
- ? means ALMOST sure, hereby signalling that the species must be additionally confirmed.
- The sequence of the species and the bird names – at least the groups - follow the SASOL “Birds of Southern Africa”. The English names follow the new (East-African) names from the 3rd edition of the book.
- If you report a new non-listed species NOT normally being present in the region or the species is very RARE according to the SASOL book, please describe the bird and the circumstances in detail and inform the admin office about the sighting. A reference to a picture in a bird book is not enough...
- 196 Natal Francolin and 199 Swainson’s Francolin were listed in the very beginning and have never been observed since and were possibly mis-identified. Therefore they are omitted from the list.
- Total 271 species.
